Hi Amanjeet,

Here is your Data Science assignment.
This is a image classification task. We're providing both training & testing sets to classify animated & realistic images with high accuracy. We expect you to employ different ML & deep learning methods available to come up with most accurate results or generate ensemble of models. Please note that there are some good libraries available like tensor flow, keras, mxnet & scikit-learn which can be deployed with custom settings/code to accomplish this task.

What needs to be turnaround -

1) Executable python code with all requirements (dependencies) along with clear instructions to run the program flawlessly.
2) Please also provide a short writeup about choosing a right strategy & your commentary for the final results.

We expect the turnaround within 2 days.

Good Luck!

Very Best regards,

health

Hi Sparsh,

I have been trying to work on the current assignment but the current workplace's project is having a lot of work. I would love to work on it and would like to request you for an extension. If possible can I get a deadline for the weekend?

Look forward to hearing from you,
Thanks and Regards,
Amanjeet Singh
